26. **R1 Club Website** — Nfineon, Oct 2008 – Oct 2008
27. **LUXE Galleria Website** — Nfineon, Jul 2008 – Jul 2008
28. **Bangkok International Film Festival 2008 Website** — Nfineon, Apr 2008 – Apr 2008
29. **Global Renewable Energy Services Portal** — Nfineon, Apr 2008 – Apr 2008
30. **DP Piranha Automotive Accessories Store** — Nfineon, Jan 2007 – Dec 2007

Skin Tyee First Nation Technology Platform

Client: Skin Tyee First Nation

May 2026

The Client

Skin Tyee First Nation is a proud Wet'suwet'en community on the shores of Francois Lake in northern British Columbia.

The Problem

The Nation needed modern technology it could own and govern itself: identity and single sign-on for staff, a website it controls, and a way to keep band members informed and involved, with the design kept auditable and the data governable by the Nation.

Our Solution

Contracted as the Nation's IT System Architect, we took on its technology end to end (identity, cloud, network, data sovereignty, security and custom software) and delivered a working, cloud-first Microsoft and Azure stack alongside a suite of purpose-built applications.

- A role-gated community app in React Native and Expo (public, band member, and admin and staff views): dashboard, member directory, community events, notifications, band meetings, public records and transparency reporting, and polling and surveys
- A billable time-keeping module with account coding, pay periods, approvals, charts and branded PDF timesheet reports
- A Consultation Referrals system with reserve and territory GIS map layers (PostGIS), versioned records and branded PDF reports, with documents stored in both SharePoint and Azure Blob Storage, plus an MCP server for AI search across referrals and documents
- Migrated skintyee.ca off Site123 to a self-hosted, headless WordPress stack on Azure Container Apps, with Azure DevOps CI/CD and a managed database with automated backups and point-in-time restore
- A contract-first NestJS API (OpenAPI) with PostGIS for land allocation and mapping, role-gated through Microsoft Entra ID

- Single sign-on on Microsoft Entra ID across Microsoft 365 and the custom apps, with Microsoft Graph integration
- Data-sovereignty policy for First Nations data governance, and backup and disaster-recovery planning

Technologies

Microsoft Azure (Container Apps, Blob Storage, managed databases, DNS/TLS), Microsoft 365, Microsoft Entra ID, Microsoft Graph, SharePoint, TypeScript, React Native, Expo, Node.js, NestJS, Prisma, PostgreSQL, PostGIS, ArcGIS, WordPress, Azure DevOps, Aspire, PowerShell, Anthropic Claude, MCP

CrashPad411 Platform Modernization

Client: CrashPad411.com

Feb 2024 – Jan 2026

The Client

CrashPad411.com is the #1 listings site for air-crew accommodation, serving more than 50,000 in-flight crew members in hundreds of cities worldwide, with thousands of crashpad listings and more than 270,000 messages sent. A crashpad is a place for airline personnel to stay when on reserve duty, on early-morning flights, or commuting to base. Under the hood it is a multi-tenant rental-listings SaaS, white labeled for enterprise / B2B customers.

The Problem

Brought on by the founder to modernize the stack, our brief was to give the platform its first automated DevOps foundation — CI/CD, containerized deployment and multi-tenant provisioning — and to modernize the full stack end to end, from the customer web and mobile apps through to the Laravel backend and its payments engine.

Our Solution

As Technical Lead we owned the architecture and led all six repositories end to end, modernizing the full stack and consolidating the platform's separate applications into a scalable, financially reconcilable, multi-tenant SaaS.

- Set up the platform's first CI/CD, GitLab pipelines deploying to DigitalOcean, moving deployment onto automated, version-controlled, containerized releases
- Authored the Azure DevOps pipelines that followed, deploying to DigitalOcean with Azure Key Vault secrets, Azure DNS, a declaratively configured Kong gateway behind an Nginx reverse proxy with Let's Encrypt SSL, and MySQL backup and restore to Azure Blob Storage
- Led the Vue 2 to Vue 3 (Composition API) migration, consolidating the customer web app, the merchant dashboard and six shared @properties/* packages into a single pnpm monorepo
- Built server-side rendering for the customer web app on Express, with performance work on assets, bundles and lazy-loaded translations

- Shipped iOS and Android apps with Capacitor (push notifications and geolocation), built through Fastlane and TestFlight
- Rebuilt the payments and subscription engine from scratch on Stripe (Connect merchant payouts, subscriptions, AutoPay rent collection, duplicate-charge protection) with a complete, auditable ledger that reconciles with Stripe
- Drove the PHP 7 to 8 and Laravel 8 to 11 upgrades; delivered single sign-on and login-as-user impersonation over OAuth2, a Laravel Nova admin, websockets and a Laravel MCP server exposing the listings API to AI agents
- Architected the 9-node white-label network (a dot.properties master federating tenant sites over RabbitMQ) and a self-service SaaS onboarding portal with Stripe billing, trials and partner referrals
- Led a complete UI/UX redesign, with Stripe checkout, subscription and AutoPay flows and Google Maps listing search

Technologies

Vue 3 (SSR, Composition API), TypeScript, Vite, pnpm, Vuex, Node.js, Express, Capacitor, Laravel 11, PHP 8.2, Laravel Nova, Laravel Passport (OAuth2), Reverb, Socket.io, Python, Bottle, MySQL, MongoDB, Redis, Stripe Connect, RabbitMQ, Kong, Nginx, Docker, GitLab CI, Azure DevOps, DigitalOcean, Azure (Static Web Apps, DNS, Key Vault, Blob Storage), Cypress, Storybook

PocketPT (Pocket Physical Therapist)

Client: Dr. Adam Fehr

Jan 2020

The Client

Dr. Adam Fehr, MD, DPT, wanted a mobile app to house and easily share his exercise videos with his patients and clients.

The Problem

Dr. Fehr needed one place to house a growing library of instructional videos, and an easy way to share a whole session's worth of them with a patient or client.

Our Solution

We designed and built PocketPT (Pocket Physical Therapist) end to end, and continue to develop it. It is an instructional-video media-sharing platform where users follow playlists of 5 to 10 short videos, a typical physiotherapy or workout session, drawn from a catalogue of around 1,000 instructional videos. It is live at app.drafehr.com.

- A cross-platform mobile and web app in React Native and Expo with Redux Toolkit and a shared component library: playlist creation and playback, media sharing, user connections, email invitations, search and tagging
- Programs organized by body region, program and training focus, with exercise progressions ordered by intensity
- An Nx monorepo of four NestJS microservices (media, users, tagging, and analytics and tracking) over MongoDB, with OpenAPI specs and generated, typed clients
- Authentication on AWS Cognito and media storage on AWS S3, deployed to AWS Lightsail in Docker containers with automated GitLab CI/CD and a Node provisioning CLI

Technologies

TypeScript, React Native, Expo, Redux Toolkit, NestJS, Nx, MongoDB, TypeORM, OpenAPI, AWS (Cognito, S3, Lightsail), Docker, GitLab CI

Phobulous Restaurant Website

Client: Phobulous Noodle House

Apr 2017 – May 2017

The Client

Phobulous is a noodle house restaurant in Edmonton, Alberta.

The Problem

The restaurant needed a site that worked as well on a phone as on a desktop, with a menu that could be kept up to date as content rather than rebuilt each time it changed.

Our Solution

We designed a custom, Asian-styled website theme and built it as a mobile-friendly React single-page app running on a headless OpenCart backend.

- Custom SPA front-end in React with CSS animations throughout
- A custom menu component
- A customized, headless build of OpenCart for content and product management, exposed to the front-end over RESTful APIs

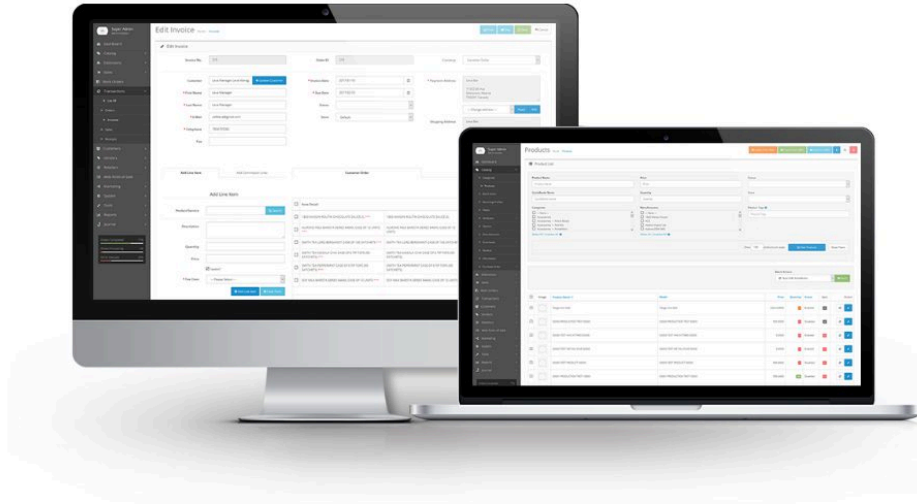

Technologies

HTML5, ReactJS, SASS, Webpack, Gulp, customized OpenCart build (headless), PHP, Slim, Doctrine ORM/DBAL, MySQL, RESTful APIs, Adobe CC (Photoshop, Illustrator, etc.), Git

iOS Tablet Point-of-Sale

Client: Caffè Tech 2004 Ltd.

Feb 2017 – Jul 2017

The Client

Caffè Tech is an Edmonton-based importer and distributor of premium (primarily Italian and Swiss) commercial and home espresso equipment, supplying many popular Albertan establishments with their restaurant and coffee-making equipment. The owner also runs Leva Cafe and Ace Coffee Roasters in Edmonton.

The Problem

Caffè Tech needed a tablet-based point-of-sale app to replace its existing PixelPoint point-of-sale systems. It had to support dedicated point-of-sale hardware and integrate with the business's existing e-commerce and accounting APIs.

Our Solution

We designed and built a hybrid tablet point-of-sale app in React and Cordova, including a custom restaurant POS for Leva Cafe with its menu and QR ordering.

- Integrated Star Micronics hardware through its native (Java / iOS) SDKs: Bluetooth and wireless cash drawers, ticket and receipt printers, and barcode scanners
- Connected the POS to the business's e-commerce store and accounting data, so sales and stock stayed in sync
- Built supporting inventory-management and invoicing micro-apps
- Local SQLite storage and OAuth2-secured RESTful APIs

Technologies

ReactJS, Redux, Material-UI, MobX, React-Bootstrap, Bluebird, Star Micronics Android/iOS SDKs, SQLite, OAuth2, RESTful APIs, Cordova, PhoneGap Build, Gulp, Webpack, Mocha, Chai, Expect.js, Jest, Adobe CC (Photoshop, Illustrator, etc.), Git, Jira, Sketch

Jimmy Poblano's Food Truck Website

Client: Jimmy Poblano's Mexican Cantina

Feb 2017 – Mar 2017

The Client

Jimmy Poblano's Mexican Cantina is an Edmonton restaurant and food truck.

The Problem

The cantina and its food truck needed a site with a personality of its own, and a menu that could be kept current as what they served changed.

Our Solution

We designed a custom, Mexican-styled website with completely custom artwork, built as a mobile-friendly single-page app on a headless OpenCart backend. We knew the business from the inside, having also helped run the food truck.

- Completely custom illustration and artwork
- Parallax scrolling effects
- A custom menu component
- A customized, headless build of OpenCart for content and product management

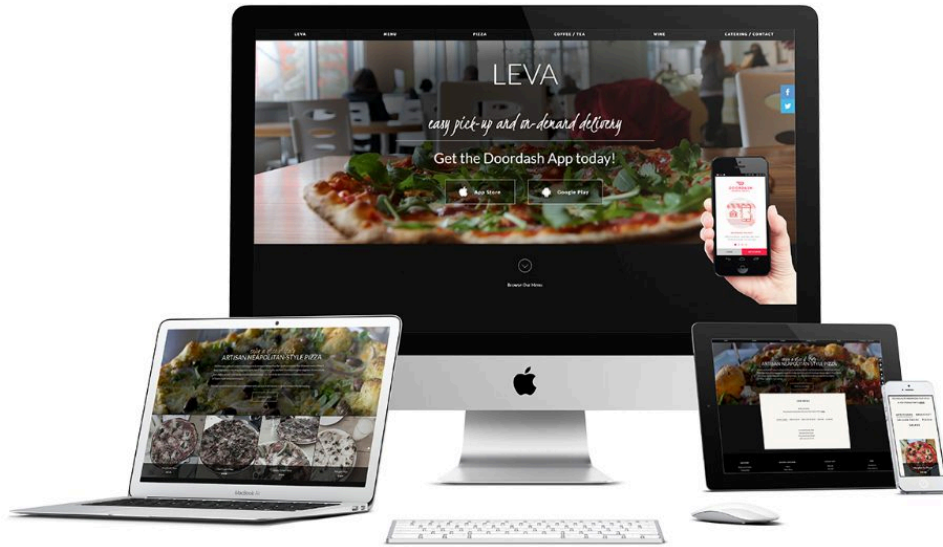

Technologies

HTML5, ReactJS, jQuery, LESS, Webpack, Gulp, customized OpenCart build (headless), PHP, Slim, Doctrine ORM/DBAL, MySQL, RESTful APIs, Adobe CC (Photoshop, Illustrator, etc.), Git

Leva Website

Client: Caffe Tech / Cafe Leva

Nov 2016 – Dec 2016

The Client

Leva Cafe is an Edmonton cafe and sister business to Caffe Tech, an importer and distributor of premium (primarily Italian and Swiss) commercial and home espresso equipment, and Ace Coffee Roasters.

The Problem

Leva needed its own customer website, distinct from Caffe Tech's, with its products and stock kept in step with the group's inventory.

Our Solution

We designed and built the customer website for Leva, one of three sites we built across the owner's businesses (alongside Caffe Tech and Ace Coffee Roasters).

- Custom, mobile-friendly theme
- Integrated with the group's e-commerce and QuickBooks inventory through our custom data bridge

Technologies

HTML5, SASS, JavaScript, jQuery, PHP, MySQL, Adobe CC (Photoshop, Illustrator, etc.), Git

Baan Saowanee

Client: Baan Saowanee

Sep 2016 – Oct 2016

The Client

Baan Saowanee is a collection of holiday home rentals on the north side of Ko Samui island, a short two-minute drive from scenic Mae Nam Beach. Guests choose from a range of rental options depending on the size of their group and the quality of accommodation they want.

The Problem

The rentals needed a site that showed the properties off and let guests weigh up the options for their group and budget.

Our Solution

We designed a custom, mobile-friendly single-page website that shows off the properties.

- Parallax scrolling effects and animated page transitions
- A customized build of OpenCart for content and product management

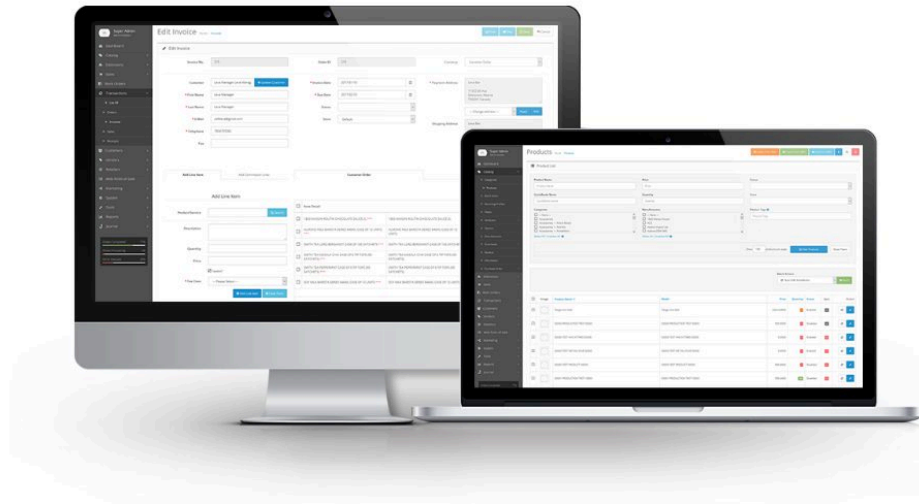

Technologies

HTML5, SASS, JavaScript, jQuery, PHP, customized OpenCart build, MySQL, Adobe CC (Photoshop, Illustrator, etc.), Git

Caffe Tech Inventory Management and Data Bridge

Client: Caffe Tech 2004 Ltd.

Mar 2016 – Aug 2016

The Client

Caffe Tech is an Edmonton-based importer and distributor of premium (primarily Italian and Swiss) commercial and home espresso equipment, with sister businesses Leva Cafe and Ace Coffee Roasters.

The Problem

With its stores migrated from Magento to QuickCommerce, and the business expanding and opening new locations, Caffe Tech needed an inventory management solution that would synchronize QuickBooks customers, inventory and stock levels, invoices, work orders and more with its e-commerce websites (Caffe Tech, Leva and Ace Coffee Roasters). Its catalogue of 5,000 to 10,000 espresso-machine parts had also never been properly catalogued.

Our Solution

We designed an event-driven software bridge: an OAuth2-secured RESTful microservice plus custom "client" extensions for QuickCommerce (OpenCart) that automatically synchronized data across multiple installations and software systems.

- Kept inventory synced live between QuickBooks Online and the online stores
- Catalogued the full parts inventory into QuickBooks, reconciled stock quantities for tax records, then migrated the business to QuickBooks Online
- Built custom inventory-management and invoicing micro-apps
- Brought the network infrastructure under control, running Microsoft Small Business Server virtualized on new Apple equipment, and trained staff across all three businesses

Technologies

HTML5, SASS, JavaScript, jQuery, PHP, Slim, Doctrine ORM/DBAL, QuickBooks PHP SDK, QuickBooks Online API, QuickBooks Desktop SDK, OpenCart, QuickCommerce, Bash, PHPUnit, REST, JSON, Swagger, Swagger Codegen, OAuth2, MySQL, CentOS, Windows Small Business Server, Parallels, Git

VEST Tablet & Kiosk Apps

Client: Video Entertainment Systems Technology Ltd.

Aug 2015 – Apr 2016

The Client

Video Systems Entertainment Technology (VEST) is an Edmonton gaming and entertainment-technology company that provides self-serve program kiosks to horse, harness and greyhound racetracks and off-track-betting sites in Canada, the US and the Caribbean. Products offered on the kiosks include full programs, profile sheets, single races and IP sheets.

The Problem

VEST wanted everything its self-serve kiosks could do — full programs, profile sheets, single races and IP sheets — available on tablets, Linux kiosks and smart televisions, and extended beyond what the existing system offered.

Our Solution

We were contracted as primary UI designer and application developer to build a hybrid app for tablets, Linux kiosks and smart televisions that replicates, and extends, the functionality of VEST's existing kiosk system. The tablets were deployed in multiple off-track-betting locations in the continental USA.

- Collaborated with stakeholders to design the system
- Built a custom hybrid Android app in Angular and Cordova, deployed to a fleet of SIM-connected kiosks and tablets
- Users can view programs through a personal account, print them at the kiosk, or have them emailed
- Built the backend services the kiosks dial up to over cellular, using Slim, Doctrine and MySQL
- Set up CI/CD pipelines with Docker, AWS and Azure to build and roll out to the kiosk fleet

Technologies

HTML5, SASS, Angular, Kendo UI for Angular, JavaScript, Webpack, Karma, Mocha, Chai, Expect.js, Cordova, PhoneGap Build, Android, PHP, Slim, Doctrine DBAL/ORM, PHPUnit, REST, XML, Bash, MySQL, Sphinx, Memcached, GD, ImageMagick, Docker, AWS, Azure, CentOS, Git

Caffe Tech E-Commerce Store

Client: Caffe Tech 2004 Ltd.

Jul 2015 – Feb 2016

The Client

With over 15 years of experience, Caffe Tech is an Edmonton-based importer and distributor of premium (primarily Italian and Swiss) commercial and home espresso equipment, selling to the retail, commercial and wholesale markets both online and in store. Its spare-parts catalogue alone runs to 5,000 to 10,000 individual parts.

The Problem

Caffe Tech's Magento store had been left half-built by another firm that couldn't complete it, and the business needed an e-commerce platform it could grow on.

Our Solution

We took over the Magento store and ran it, then migrated the business onto QuickCommerce, our customized OpenCart e-commerce platform.

- Migrated the store from Magento to QuickCommerce, our customized OpenCart platform
- Canada Post and Purolator shipping integrations for the new store, with label printing on a thermal printer
- Custom QuickCommerce extensions, laying the groundwork for our QuickBooks data bridge, which followed

Technologies

OpenCart, QuickCommerce, Magento, Linux, Apache, PHP, MySQL, jQuery, SOAP, GD, ImageMagick & Imagick for PHP, GhostScript (PDF), Git

Caffe Tech Magento Store

Client: Caffe Tech 2004 Ltd.

Jan 2015 – Jun 2015

The Client

With over 15 years of experience, Caffe Tech is an Edmonton-based importer and distributor of premium (primarily Italian and Swiss) espresso machines and coffee-related products, selling to the retail, commercial and wholesale markets both online and in store.

The Problem

The store was running on Magento 1.2.x and needed to move to a current version, and the shipping and payment integrations the business depended on did not exist off the shelf.

Our Solution

We were contracted to overhaul Caffe Tech's original Magento 1.2.x store and as its extension developer.

- Reconstructed the store's template for compatibility with Magento 1.7.x
- Developed the only comprehensive Purolator shipping extension for Magento, using Purolator's SOAP Shipping API: international shipments, custom packaging and multiple items per package, document generation, label printing, pickup scheduling and tracking
- Built a custom payment extension for Global Payments (Canada)

Technologies

Magento, Linux, Apache, PHP, MySQL, Prototype, SOAP, GD, ImageMagick & Imagick for PHP, GhostScript (PDF), Git

Spasation Website and Online Store

Client: Spasation

Jun 2011 – Aug 2011

The Client

Spasation is an Alberta-based chain of spas and salons.

The Problem

The chain needed an online store to sell alongside its spas and salons, with Canada Post shipping handled at checkout.

Our Solution

We designed and built Spasation's website and online store.

- A custom, responsive theme for OpenCart
- A custom Canada Post shipping extension for the online store
- A customized OpenCart build for content and product management

Technologies

OpenCart, Linux, Apache, PHP, MySQL, jQuery, HTML, CSS

Carsgone.com

Client: Carsgone (Magazine)

May 2011 – Oct 2012

The Client

Carsgone is an Edmonton-based, nationally spanning automotive classifieds magazine and website, with a print distribution network across Alberta and Ontario. The site is supported by partnerships with data providers as well as the magazine's print operation. The project was delivered with Strathcom Media (Edmonton) as an original virtual-dealership concept.

The Problem

Listings arrived both from end users and as high-volume feeds from data providers, and the site had to stay fast and findable as the catalogue grew to tens of thousands of vehicles — while the magazine's print edition needed to reach the web too.

Our Solution

We rebuilt the online marketplace and classifieds site for listing vehicles, serving independent buyers and sellers as well as hundreds of dealerships across Canada. Listings were either posted by end users or aggregated from data providers including Strathcom Media and Boost Motor Group. At its peak the site listed over 90,000 vehicles from more than 600 dealerships.

- Architected, designed and developed the web application and API
- Redesigned application components and classes, and the associated databases and data access layer
- Redesigned the end-user and administrative user interfaces
- Designed and developed SOAP, REST and XML-RPC solutions for parsing massive, high-density data feeds from Boost Motor Group, Strathcom Media and dozens of independent dealerships, using a multi-threaded parser
- Optimized search indexing and caching using the Sphinx open-source search server
- Combined SEO optimization with dynamic content generation, growing indexed pages from 350,000 to over 3.2 million

- Designed and built a Print to PDF to Web publishing application for the magazine, using Kohana and ImageMagick
- Optimized image caching, and handled QC/QA testing and debugging

Technologies

HTML, CSS, JavaScript, jQuery, PHP, Kohana/CodeIgniter, Kohana ORM, SOAP, REST, XML-RPC, XML, MySQL, Sphinx, Memcached, GD, ImageMagick, Photoshop, Illustrator, Git

RMG Selection Recruitment Portal v3

Client: RMG Selection

Apr 2011 – Jun 2011

The Client

RMG Selection is an award-winning, China-focused international executive recruitment and HR consultancy with over 30 offices around the world.

The Problem

The site needed a responsive rebuild, with a job board RMG could run itself.

Our Solution

Version 3 of RMG Selection's recruitment website was a complete rebuild on WordPress. We had built the previous, 2009 version of the site, starting through Smart Traffic before working with RMG directly.

- A responsive WordPress theme designed for the new site
- A custom Job Board extension for WordPress

This rebuild won the Best Job Board award at the 2014 Global Recruiter Asia Pacific Awards in Singapore.

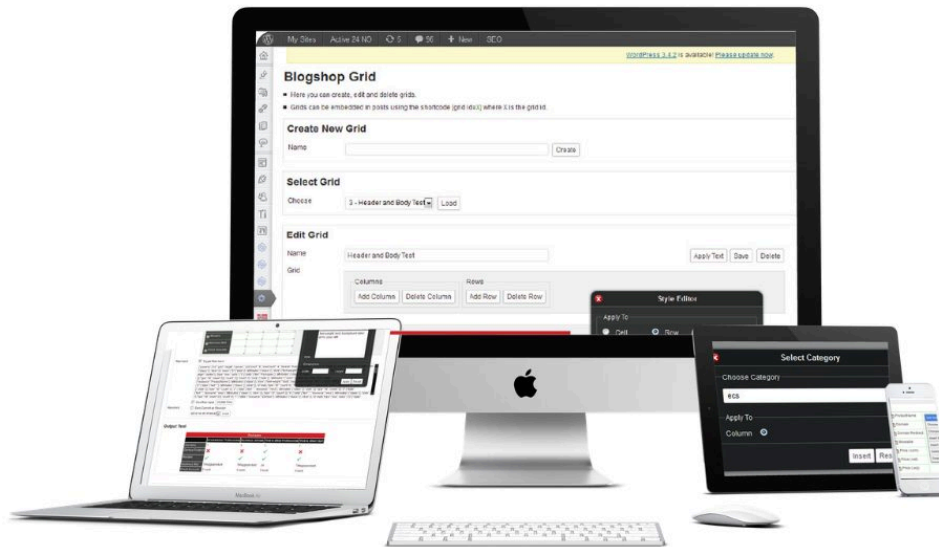

Technologies

WordPress, Linux, Apache, PHP, MySQL, jQuery, GhostScript (PDF)

Product Matrix WordPress Extension

Client: Active 24 (now Visma)

Apr 2011 – Jun 2011

The Client

Active 24 (now Visma) is an independent, pan-European provider of internet hosting services. The company focuses on providing small and medium-sized companies and private individuals with hosted solutions that combine scalable and standardized products.

The Problem

Active 24's hosting packages are presented as comparison matrices that change often, and staff needed to create and update them on the corporate site and stores without touching page markup.

Our Solution

We designed and built a WordPress plugin to create, display and update the product matrices that compare Active 24's hosting packages on its corporate website (active24.no) and online stores, with a WYSIWYG, Excel-style matrix editor.

- A GUI to create grids and matrices, with full CRUD for resource (product) rows, columns and cells
- Matrix resource integration, so rows and columns are bound to real products and categories
- Inline, AJAX-based editing
- Cell content overriding
- A style editor for formatting resource rows, columns and cells
- Revisions and live output monitoring while editing

Technologies

WordPress, Linux, Apache, PHP, MySQL, Prototype, AJAX

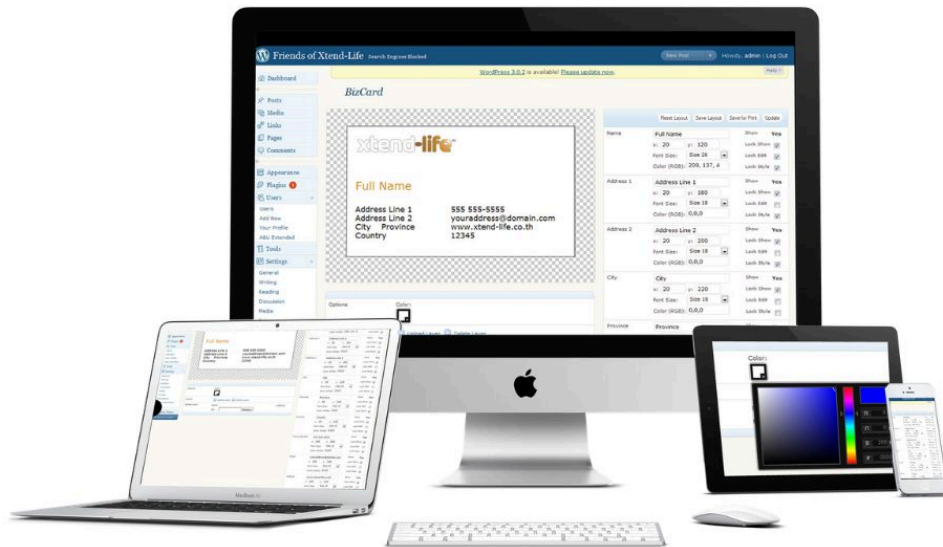

Nov 2010 – Feb 2011

Online Affiliate Portal

Client: Xtend-Life

Apr 2010 – Sep 2010

The Client

Xtend-Life Natural Products is a maker of natural health supplements.

The Problem

Every affiliate needed their own site and marketing material without anything being built from scratch each time, and their business cards had to be produced at print resolution from the browser.

Our Solution

We developed a custom affiliate website and marketing platform for Xtend-Life.

- Individual affiliate sites are auto-generated using a custom WordPress MU (multisite) implementation
- A global administrative interface built with ASP.NET MVC

We also developed a business card publishing plugin for WordPress MU.

- AJAX WYSIWYG editing, with user and admin layout modes
- Custom file upload and placement
- Live colour, font size and coordinate changes
- Adjustable print resolution output (300 dpi by default)
- Image processing via GD or Imagick, with export to major publishing formats including TIFF, EPS and PDF
- Compatibility with the Cimy User Extra Fields plugin

Technologies

WordPress MU, Linux, Apache, PHP, MySQL, jQuery, Mootools, Moo4Q, GD, ImageMagick & Imagick for PHP, GhostScript (PDF), C#, ASP.NET MVC, Entity Framework, T-SQL, SQL Server, Visual Studio, Windows Server, IIS, SVN

MyFoneRecycle E-Commerce Website

Client: Smart Traffic/Smart Site

Jun 2010 – Jun 2010

The Client

MyFoneRecycle is a UK-based mobile phone recycling website. We built it in partnership with Smart Traffic, an Australian digital agency operating in Bangkok.

The Problem

Selling a phone for recycling had to be quick, repeat sellers needed a reason to come back, and staff needed to manage products and orders in bulk — none of which OpenCart did out of the box.

Our Solution

We designed a custom e-commerce theme and carried out an extensive, radical overhaul of the OpenCart e-commerce system's core and peripheral classes, with strict MVC development throughout. Custom components included:

- A custom-built one-step checkout
- An extensive customer rewards system
- Customer feedback and testimonial components
- New and improved product and order filters in the administration
- Batch product and category actions
- User-defined category options and fields
- A mail and post options component

Technologies

OpenCart, Linux, Apache, PHP, MySQL, jQuery, GD, ImageMagick & Imagick for PHP, GhostScript (PDF)

Gorilla Print UK E-Commerce Website

Client: Smart Traffic/Smart Site

Apr 2010 – Apr 2010

The Client

Gorilla Print is a UK-based print company. We built its store in partnership with Smart Traffic, an Australian digital agency operating in Bangkok.

The Problem

A print business needed an online store where customers could prepare their artwork in the browser and order it, with output produced at print resolution.

Our Solution

We designed and implemented a custom e-commerce theme and a series of extensions for the OpenCart e-commerce system.

- A custom one-step checkout
- A publishing plugin for OpenCart with AJAX WYSIWYG editing
- Custom file upload and placement, and live style editing
- Adjustable print resolution output
- Image processing via GD or Imagick, with export to major publishing formats including TIFF, EPS and PDF

Technologies

OpenCart, Linux, Apache, PHP, MySQL, jQuery, Mootools, Moo4Q, GD, ImageMagick & Imagick for PHP, GhostScript (PDF)

Wholesale Silver Jewelry E-Commerce Website

Client: Smart Traffic/Smart Site

Jan 2010 – Jan 2010

The Client

Wholesale Silver Jewelry is a Thailand-based manufacturer and wholesaler of sterling silver jewelry and gemstones, selling to trade customers worldwide. We built its store in partnership with Smart Traffic, an Australian digital agency operating in Bangkok.

The Problem

Selling wholesale to trade customers around the world meant pricing in several currencies, a checkout that could be completed in one step, and card payments through a Thai gateway.

Our Solution

We designed and implemented a custom e-commerce theme and several extensions for the OpenCart e-commerce system.

- A custom-built one-step checkout, with address, shipping route, payment and review steps on a single page
- A custom payment gateway integration with Thai e-Pay for credit and debit card payments, alongside PayPal, bank transfer and Western Union
- Multi-currency pricing

Technologies

OpenCart, Linux, Apache, PHP, MySQL, jQuery, GD, ImageMagick & Imagick for PHP, GhostScript (PDF)

Binc VFX Website and Asset Management System

Client: Nfineon

Aug 2009 – Aug 2009

The Client

Binc BKK VFX was a boutique visual effects studio in Bangkok, Thailand.

The Problem

The studio needed a website, and behind it somewhere to manage clients and track the assets moving through its projects.

Our Solution

We designed the studio's website and built the client-management and asset-tracking database behind it, based on a project we helped contribute to: the TACGA (Thai Animation and Computer Graphics Association) Media Management System. We also collaborated with the studio on several prototyping projects.

- Custom website design, integrated with the studio's asset management platform
- A client-management and asset-tracking database

Technologies

Linux, Apache, PHP, MySQL, jQuery, FFmpeg, Adobe Flash

HDF Mercy Centre Website

Client: Nfineon

May 2009 – May 2009

The Client

The Human Development Foundation and the Mercy Centre are a non-profit organization in Bangkok. They build and operate schools, improve family health and welfare, protect street children's rights, combat the AIDS crisis, respond to daily emergencies, and offer shelter to orphans, street children and children with AIDS.

The Problem

The foundation needed donating, sponsoring a child and its wish list to be easy to find and act on, alongside news, events and somewhere for supporters to talk to each other.

Our Solution

We designed and built the Mercy Centre's website on Joomla, with a blog-style layout that puts donations and sponsorship front and centre.

- A Joomla-powered, blog-style layout
- An integrated phpBB forum system, powering the web board
- A custom-designed AJAX event management system
- Donate Today, Sponsor a Child and Wish List sections, with a PayPal donation panel
- Picture galleries, downloads and multi-language support

Technologies

Joomla CMS, phpBB, Linux, Apache, PHP, MySQL, jQuery, AJAX, PayPal

Kantana Animation Studios Website

Client: Nfineon

Mar 2009 – Mar 2009

The Client

Kantana Group PCL (Public Company Limited) is Thailand's largest media organization.

The Problem

The studio's site had to be ready for the release of Khan Kluay 2 and carry a great deal of photo and video material.

Our Solution

We were contracted to redesign the website for Kantana Animation Studios to accompany the release of Kantana's hit CG movie Khan Kluay 2, a domestic animated feature about a family of elephants. We also built the website for the Khan Kluay animated feature itself.

- A redesigned "web 2.0" interface with a Joomla-powered, blog-style layout
- Media-rich pages with serious interactivity
- A custom theme and several custom Joomla extensions, including extensions for managing photo and video assets

Technologies

Joomla CMS, Linux, Apache, PHP, MySQL, jQuery, FFmpeg, Adobe Flash

RMG Selection Recruitment Portal (2009 Version)

Client: RMG Selection

Jan 2009 – Dec 2009

The Client

RMG Selection is a China-focused international executive recruitment and HR consultancy, with offices including Hong Kong and Singapore.

The Problem

The site had to serve candidates and clients in more than one language, let candidates send a CV straight from the page, and work for visitors arriving on the first generation of smartphones.

Our Solution

We designed and built the 2009 version of RMG Selection's executive recruitment website, together with a dedicated mobile section built for early mobile device adoption, at a time when very few recruitment sites had one.

- Customized the off-the-shelf Jobs! component to support additional languages, and designed a suite of modules for the front-end display requirements
- Job search by location, specialisation and salary range, with vacancies grouped by specialist area and location
- A Send CV module so candidates can upload their CV and submit it to the site as an email attachment
- A dedicated mobile section (m.rmgselection.com) built for early mobile device adoption, with browse jobs, client services and candidate services
- A custom WURFL-powered plugin that detects the visitor's device and automatically switches between the desktop and mobile templates
- Multi-language support, news sign-up and a web poll

Technologies

HTML, CSS, JavaScript, jQuery, PHP, MySQL, WURFL, Linux, Apache

R1 Club Website

Client: Nfineon

Oct 2008 – Oct 2008

The Client

R1 Club was an exclusive, membership-based Southeast Asian club providing luxury services, including vehicle and yacht rentals, to members in Thailand, Malaysia and Singapore. It was a sister site to LUXE Galleria.

The Problem

A members-only club needed a site that presented its collection of cars, yachts, estates and jets, and handled membership.

Our Solution

We designed a custom theme, a custom Joomla-based CMS and several custom extensions for the club.

- Extensions for managing photo and video assets
- A custom-made membership component

Technologies

Joomla CMS, Linux, Apache, PHP, MySQL, jQuery, FFmpeg, Adobe Flash

LUXE Galleria Website

Client: Nfineon

Jul 2008 – Jul 2008

The Client

LUXE Galleria was a membership-based publication and television network targeting haute couture and luxury lifestyle in Southeast Asia.

The Problem

The network needed to publish high-quality video and photography on the web, with blogs, forums, comments and downloads for its members.

Our Solution

We designed a media- and feature-rich site for the LUXE Galleria network, with a custom theme and several custom extensions for Joomla CMS.

- A powerful Flash-based media management system
- A custom FFdshow-powered showcase plugin to feed high-quality video and pictures through the front-end
- Front-end access to blogs, forums, article comments, RSS feeds and media downloads, all managed through the CMS
- A custom-made membership component

Technologies

Joomla CMS, Linux, Apache, PHP, MySQL, jQuery, FFmpeg, FFdshow, Adobe Flash

Bangkok International Film Festival 2008 Website

Client: Nfineon

Apr 2008 – Apr 2008

The Client

The Bangkok International Film Festival is an annual international film festival held in Bangkok, Thailand.

The Problem

The festival needed a site for an international audience for its 2008 edition: film media, galleries, registration, and news in more than one language.

Our Solution

We designed a media-heavy website for the 2008 festival, with a custom theme and several custom extensions for Joomla CMS.

- Streaming media technologies, including an in-page film media player
- Advanced Flash-based photo and video galleries
- Multiple-language translation capabilities
- Extensions for managing photo and video assets
- Festival registration, news and event update sections

Technologies

Joomla CMS, Linux, Apache, PHP, MySQL, jQuery, FFmpeg, Adobe Flash

Global Renewable Energy Services Portal

Client: Nfineon

Apr 2008 – Apr 2008

The Client

Global Renewable Energy Services (GRES) is a California, USA-based biofuels research think tank.

The Problem

The think tank wanted somewhere for the biofuels industry to discuss the technology, share documents and find each other.

Our Solution

We developed a biofuel-centric community portal for GRES, giving members of the industry a place to discuss renewable energy technologies and connect with key players.

- A fully fledged, interactive portal with file sharing and document management
- Discussion forums covering biofuel topics and feedstock growing
- Integrated social networking, with member profiles, friends, photos, groups and activity feeds
- Custom extensions for integration with popular third-party sites, including Facebook

Technologies

Joomla CMS, Linux, Apache, PHP, MySQL, jQuery, FFmpeg, Adobe Flash

DP Piranha Automotive Accessories Store

Client: Nfineon

Jan 2007 – Dec 2007

The Client

DP Piranha is a supplier of stylish, quality automotive accessories, including aero parts, skirt sets, spoilers, visors and lamp guards, exporting worldwide to automotive brands, international dealers and large distributors.

The Problem

Accessories only fit particular vehicles, so customers had to be able to narrow the catalogue by brand, model, year and style — and staff had to manage a large product range without editing it one item at a time.

Our Solution

We built DP Piranha's online store on Joomla and a heavily modified Zen Cart build.

- A heavily modified Zen Cart build with a redesigned database, optimized to improve search performance
- Enhanced, bulk product management features in the administration
- Vehicle-based product search by brand, model, year and style
- Dealership inquiry, product brochure download and OEM / custom order sections

Technologies

Joomla CMS, Zen Cart, Linux, Apache, PHP, MySQL, jQuery
